

# TOPICS FOR YOUR SEPTEMBER MEETING

- **Physical-biogeochemical modeling**
  - Model results that quantify the extent to which nutrient input reduction affects acidity and hypoxia in coastal shelf waters
  - Biological thresholds with which to interpret those results
- **What we know about microplastics in wastewater effluent**
  - Summary of research by others
- **Two State Board updates**
  - One on Toxicity Policy (carryover from this meeting)
  - One on status of CEDEN
  - Both would be probably be given by Karen Mogus

# TOPICS FOR YOUR DECEMBER MEETING

- **Antibiotic resistance study outcomes**
  - Good interim answer available in September
- **Newport Bay's approach to attaining microbiological criteria for shellfish waters**
  - Full answer available in September
- **New genetic profiling approaches to source tracking for human fecal material**
  - Only the earliest glimpses available in September
  - However, we would not have anything close to final answers in December either
- **QMRA update**
  - Would not have much to say
  - This was the lowest priority project among your requests
